Maternity Care

Round-the-clock support

2

Expert Doctors

Specialists on call

Location: **Panchkula, Haryana** — Trusted by thousands of families across the region

SECTION 1 · PROBLEM

Why a Smart System?

Phone Congestion

Patients wait on hold, miss calls, or fail to reach the right department during peak hours.

Double Bookings

Manual scheduling causes slot conflicts, conflicts, overbooked doctors, and frustrated patients.

No Record System

Patient data scattered across paper registers — no history, no tracking, no audit trail.

Zero Notifications

Patients miss appointments, doctors aren't alerted, and admins operate without real-time updates.

Wasted Time

Staff spends hours on manual coordination instead of focused patient care.

The Solution

A centralized smart digital platform that automates bookings, notifies all parties, and gives full control to the admin.

SECTION 2 · SOLUTION

Project Goal

Build a **complete digital ecosystem** for Noheria Nursing Nursing Home that automates appointments, manages manages doctors and patients, and empowers admins with admins with full control.

1. Automate appointment booking — no phone calls needed
2. Real-time slot management — zero double bookings
3. Multi-role dashboard — Patient, Doctor, Admin, Staff
4. Instant notifications via Email and WhatsApp
5. Full admin control — manage website, blog and SEO

Better

Than WordPress

Custom Next.js system built for hospitals — not a a generic CMS.

Scalable

Future Ready

Designed to grow with the hospital's expanding needs.

SECTION 2 · SOLUTION

Key Features Overview

Smart Booking

Online appointment with real-time slot time slot availability

Doctor Panel

Accept, reject, reschedule and complete appointments

Admin Dashboard

Full control over appointments, doctors, and patients

Notifications

Email and WhatsApp alerts for all parties

Secure Auth

Role-based access for doctors, admin, and staff

Website CMS

Edit text, images, blog posts and SEO directly

Audit Logs

Track all actions with live status monitoring

Auto slot-check, spam protection and doctor assignment

SECTION 2 · USERS

System Users

Patient

Visits website, selects doctor, fills form, and books a time slot

- Book appointment
- Get notifications
- View status

Doctor

Reviews appointment requests and manages their daily schedule

- Accept / Reject
- Reschedule
- Mark complete

Admin

Full control over all data, website, blog, and system settings

- Manage all data
- Edit website
- Full analytics

Staff

Front desk team with limited access to manage daily operations

- View schedule
- Update status
- Limited access

Patient Journey Overview

Visit Website

Patient opens hospital website on any on any device

Select Doctor

Browse available doctors and specializations

Pick a Slot

Choose from real-time available time slots

Confirmed

Request sent, notification delivered delivered instantly

The entire process takes under **2 minutes** — from website visit to confirmed booking, fully automated

Booking Process

1 Visit the Website

Patient opens the Noheria Nursing Home website on any browser — mobile, tablet, or desktop. Fully responsive experience.

2 Select Doctor

Patient browses available doctors — Dr. Sushma Noheria or Dr. V K Noheria — with their specializations and available days.

3 Fill the Form

Simple form: name, phone, age, reason for visit, preferred date and time and time slot. All fields validated automatically.

Smart Slot System

Real-Time Availability

The system shows only genuinely available slots based on the doctor's schedule, approved appointments, and operating hours — updated in real time.

Zero Double Bookings

Once a slot is booked or pending, it is locked system-wide. No two patients can ever book the same time slot with the same doctor.

Smart Conflict Detection

The system auto-detects schedule conflicts, holidays, and doctor leaves — blocking those blocking those slots automatically from the patient view.

Slot Status Legend

- Available — Can be booked
- Pending — Awaiting confirmation confirmation
- Booked — Fully locked slot
- Blocked — Doctor unavailable

0

Double Bookings

Guaranteed by the system logic

SECTION 3 · CONFIRMATION

Booking Confirmation

Request Submitted

Patient's booking request is logged in the system with status set to **Pending** — awaiting doctor or admin approval.

Notifications Sent

Instant alerts sent to **the patient**, **the the assigned doctor**, and the **admin team team** — all three simultaneously.

Slot Locked

The requested time slot is immediately locked and removed from the availability grid — no second booking possible.

Patient receives

- Email Confirmation
- WhatsApp Alert
- Booking ID

Backend Process

Data Receive

All form data — patient name, phone, doctor preference, date, time — is received by the backend API server via a secure POST request.

Validation

All fields are validated server-side — phone format, date range, doctor availability, required fields — before any action is taken. Invalid submissions are rejected with clear error responses.

Spam Protection

Rate limiting, CAPTCHA validation, and duplicate submission detection block bot traffic and prevent system abuse from malicious actors.

Request Flow

1. POST /api/appointments
2. Validate & sanitize input
3. Spam & rate limit check
4. Save to database
5. Return success response

Smart Logic Engine

Slot Availability Check

- Query database for existing bookings in requested slot
- Check doctor's schedule and leave calendar
- Verify against hospital operating hours
- Lock slot atomically on approval

Doctor Auto-Assignment

- If patient selects a specific doctor — direct assignment
- If no preference — system picks least-busy available doctor doctor
- Admin can override assignment anytime
- Doctor is notified immediately upon assignment

Instant slot locking prevents race conditions — even concurrent requests are handled safely

Workload is balanced across doctors — preventing burnout and ensuring quality care

Database + Notifications

Save to Database

Booking is stored with status **Pending** until the doctor or admin takes action.

- Patient details
- Booking date/time
- Doctor assigned
- Status: Pending
- Booking ID
- Timestamp logged

Notification Triggers

Three simultaneous alerts are dispatched the moment a booking is saved.

- **Patient:** booking summary + estimated wait
- **Doctor:** new patient request with details
- **Admin:** full booking data in dashboard

Notification Channels

Email

Formal confirmation with appointment details

WhatsApp

Instant message — accessible without internet

Real-Time Dashboard

Live update in Admin and Doctor panels

Admin Superpowers

- Full system override access
- Real-time analytics and reports
- Manage all doctors and patients patients
- View complete audit history
- Edit website and blog content

Appointment Management

Approve

Admin can approve any pending appointment directly from the dashboard, even without the doctor's action. Useful for urgent cases and overflow management.

Patient notified immediately

Doctor receives update alert

Edit

Admin can modify any appointment detail — patient information, assigned doctor, date, time, or add internal notes without creating a new booking.

All edits logged with timestamp

Affected parties notified

Delete

Admin can permanently remove any appointment from the system. Requires confirmation dialog for safety. Freed slot becomes immediately available for new bookings.

Confirmation required first

Deletion logged permanently

Admin has **full override capability** — every action is logged, reversible where safe, and requires appropriate confirmation

Doctor and Patient Management

Doctor Management

- Add new doctors with full profile
- Set availability hours and leave dates
- Enable/disable doctor login access
- View appointment history per doctor
- Performance metrics and completion rates

Patient Management

- View complete patient profiles
- Full appointment history per patient
- Search, filter, and export patient data
- Block problematic accounts if needed
- Manual booking creation on behalf of patient

Website + Blog Management

PREMIUM FEATURE

Full Website Control

- Change all text content without a developer
- Upload and swap images and banners
- Update contact info and opening hours
- Manage doctor profiles and bios

Blog Management

- Create blog posts with rich text editor
- Edit and update existing articles
- Delete or unpublish posts instantly
- Schedule posts for future publication

SEO Ready

- Edit meta titles and descriptions per page
- Custom URL slugs for each blog post
- Auto sitemap generation
- Google indexing friendly structure

No WordPress — no plugins — no maintenance headaches. Built-in. Always fast. Always secure.

Smart Features

Doctor Tracking

Admin can monitor each doctor's real-time appointment load, completion rate, and availability to optimize workload distribution and prevent bottlenecks.

Dr. Sushma — 8 appointments today — 75% complete

Live Status

Real-time appointment status updates across all panels simultaneously — when a doctor marks complete, the admin sees it instantly. No page refresh needed.

Instant sync across all dashboards

Audit Logs

Every single action in the system is timestamped and logged — who did did what, when. Full accountability trail trail for doctors, admins, and staff at all all times.

Immutable log — cannot be altered

Notification System

Email Notifications

- Booking confirmation email with appointment ID
- Reminder 24 hours before the appointment
- Status change alerts — approved, rejected, rescheduled
- Professional HTML templates with branding

WhatsApp Notifications

- Instant message — accessible without internet
- Appointment details in familiar chat format
- Reminder messages for upcoming visits
- High open-rate — most patients respond

Technology Stack

Built with Next.js

Next.js 14+
Server-side rendering, SEO optimized

React
Modern UI with component architecture

PostgreSQL
Robust relational database

Tailwind CSS
Pixel-perfect responsive design

Node.js API
High-performance backend services

TypeScript
Type-safe, reliable codebase

Why NOT WordPress?

- No plugin vulnerabilities — custom built for hospital use
- 10x faster load times — no bloat, pure performance
- Hospital-specific workflows built from the ground up

Performance Promise

Page Load Speed 99/100

Mobile Friendly 100%

SEO Score 95/100

Uptime SLA 99.9%

Security Architecture

Authentication

Secure login with JWT tokens and session session management. Passwords hashed hashed with bcrypt — never stored in in plain text.

- JWT session tokens
- Bcrypt password hashing
- Auto session expiry

Data Protection

All patient data encrypted at rest and in transit. HTTPS enforced everywhere. Regular automated backups with point-in-time recovery.

- SSL/TLS encryption
- Daily automated backups
- OWASP security standards

Role-Based Access

Four distinct access levels — Patient, Doctor, Staff, Admin. Each role sees only what they need. Admin grants and revokes access centrally.

- 4-level role hierarchy
- Permission-level API guards
- Centralized access control

Patient data is treated with the same care as clinical data — **privacy is a right, not a feature**

End-to-End System Flow

PATIENT

- Visit hospital website
- Select doctor + time slot
- Fill and submit form
- Receive confirmation
- Visit hospital on day

→

SMART SYSTEM

Validates Patient Data

Checks Doctor Availability

Sparks Doctor

Assigns Doctor

Saves Record

Notifies All

Automated — — Zero human intervention required

→

DOCTOR

- View new request alert
- Accept or reschedule
- Conduct appointment
- Mark as complete
- Add clinical notes

→

ADMIN

- Monitor all appointments
- Override when needed
- Manage website and blog
- View analytics reports
- Full system control

One unified platform — **Patient to Doctor to Admin** — fully connected, fully automated

NOHERIA NURSING HOME — SMART APPOINTMENT SYSTEM
